
**FO1 CHLOR (NP1666) Efficacy Against
Staphylococcus aureus, Escherichia coli, Pseudomonas aeruginosa &
Enterococcus hirae using EN1276: 1997**

Introduction

This test was carried out to determine the efficacy of the Chlorine Foamer NP1666, a chlorine based foaming cleaner and sanitiser. The EN 1276 bactericidal suspension test was used and the efficacy was tested against 4 bacterial strains Staphylococcus aureus, Escherichia coli, Pseudomonas aeruginosa and Enterococcus hirae. A soiling agent and hard water was used in the test.

Bactericidal activity in general use conditions**Staphylococcus aureus, Escherichia coli, Pseudomonas aeruginosa, Enterococcus hirae****a) ID Test Lab**.....NCH European Technical Centre**b) ID Sample**

NameChlorine Foamer

Batch No..... NP 1666 168 78-9

Manufacturer..... NCH

Date of Delivery..... 23/11/06

Storage..... Room Temperature

Active ingredients... Hypochlorite

c) Test Method and its validation

Method..... EN1276:1997 Bactericidal Activity (phase 2 step 1)

Neutraliser 90ml/l Tween 80, 9g/l Lecithin, 3g/l L-Histidine, 15g/l Sodium Thiosulphate in Diluent.

d) Experimental Conditions

Period of analysis..... 06/02/06 to 24/02/06

Product diluent in test.. Sterile hard water 300 mg/kg CaCO₃

Test Concentrations 2,1.5,1.0,0.5,0.1%.

Test Temperature..... 20°C

Contact time..... 5 minutes

Interfering substance...3g/l of bovine albumin

Incubation Temp..... 36°C ± 1°C

Identification of bacterial strains used Escherichia coli NCIMB 8879
Staphylococcus aureus NCIMB 9518
Pseudomonas aeruginosa NCIMB 10421
Enterococcus hirae NCIMB 8191**e) Test Results**

f) Conclusion

According to EN 1276:1997 the batch, NP 1666 168 78-9, of the product Chlorine Foamer possesses bactericidal activity in 5 minutes at 20°C under dirty conditions(3g/l bovine albumin) for the strains Staphylococcus aureus NCIMB 6518, Escherichia coli NCIMB 8879, Pseudomonas aeruginosa NCIMB 10421 & Enterococcus hirae NCIMB 8191

5 minute Contact Time

Chlorine Foamer produced a 5 log reduction in viable count of S. aureus (1.5%), E coli (1.0%), E hirae (1.0%) & Ps aeruginosa (0.5%) and PASSED the EN1276:1997

RESULTS

Pass Rate for EN 1276 is 5 log or 99.999% reduction

Table 1 Verification of the methodology and validation of dilution-neutralisation method for the test concentration of the test product – Chlorine Foamer

Test organism	Viable Count (cfu/ml)				
	Bacterial Test suspension (N)	Bacterial Suspension (Nv)	Experimental Conditions (A)	Neutraliser toxicity Control (B)	Dilution neutralisation control (C)
S. aureus	2.8×10^8	2.7×10^3	2.5×10^2	2.7×10^2	2.7×10^2
E. coli	1.7×10^8	1.7×10^3	1.8×10^2	1.7×10^2	1.6×10^2
Ps aeruginosa	1.8×10^8	1.7×10^8	1.7×10^2	1.8×10^2	1.7×10^2
E hirae	1.6×10^8	1.6×10^3	1.7×10^2	1.8×10^2	1.5×10^2

For the strains tested:

N = number of cfu/ml of the bacterial test suspension

Nv = number of cfu/ml of the bacterial suspension

A = number of cfu/ml of the experimental conditions validation

B = number of cfu/ml of the neutraliser toxicity validation

C = number of cfu/ml of the dilution-neutralisation validation

The inactivation is validated for the test concentration of Chlorine Foamer for the strains tested.
